

7.1.4

*Water conservation facilities available in the Institution:*

Q<sub>n</sub>M

1. Rain water harvesting
2. Bore well /Open well recharge
3. Construction of tanks and bunds
4. Waste water recycling
5. Maintenance of water bodies and distribution system in the campus

**Options:**

A. Any 4 or all of the above

B. Any 3 of the above

C. Any 2 of the above

D. Any 1 of the above

E. None of the above

- Rainwater is collected from the rooftop of the College building, with the help of systematically laid pipes and stored in a well. This helps in reinvigorating the well water springs, which help to supply water even in the summer months of April, May and June. This helps us to subsist until the monsoon arrives because we cannot much depend upon the local water supply. The well is a boon during the months of water shortage
- Besides collecting rainwater in the well, we also collect it **in five molded** plastic tanks with a capacity of 1000 liters each. This water is used in place of distilled water for the purpose of science practical sessions. This practice helps to reduce the expenses on distilled water without affecting the quality of the experiments.
- Students also realize the importance of water collection and harvesting and become aware of the importance of water saving and conservation.
